PYTHON ASSIGNMENT 3: String inside the Function

PROBLEM STATEMENT

Write a Python program to reverse a string.

Sample String : "1234abcd"

Expected Output : "dcba4321"

CODE :

```python
def rev_string(string):
    rev_string=string[::-1]
    return rev_string
sample_string='1234abcd'
print("Given string is:", sample_string)
rev_string=rev_string(sample_string)
print("The reverse value of the given string is:", rev_string)
```

OUTPUT :

```
Given string is: 1234abcd
The reverse value of the given string is: dcba4321
```

EXECUTION:

```python
[2] def rev_string(string):
        rev_string=string[::-1]
        return rev_string
    sample_string='1234abcd'
    print("Given string is:", sample_string)
    rev_string=rev_string(sample_string)
    print("The reverse value of the given string is:", rev_string)
```

```
Given string is: 1234abcd
The reverse value of the given string is: dcba4321
```
